

Practical exercises on Testing our Code

Go back to all the haskell code you have produce / implemented so far and do the following:

Practising Testing

1. Finish reading the lesson on Testing from the course reference book (Programming Haskell from First Principles)
2. Complete the exercises suggested in the Testing lesson
3. Resolve all exercises in the Testing chapter from the course reference book (Programming Haskell from First Principles)

Testing your code

1. Define unit and specification testing for all your functions
2. Defined the properties that unfold from each function / functionality
3. Use Quickcheck and / or Hspec to test them
